February 11, 2020

---

BSgenome.Dmelanogaster.UCSC.dm6

*Full genome sequences for Drosophila melanogaster (UCSC version dm6)*

---

## Description

Full genome sequences for *Drosophila melanogaster* (Fly) as provided by UCSC (dm6, Aug. 2014) and stored in `Biostrings` objects.

## Note

This `BSgenome` data package was made from the following source data files:

dm6.2bit from <http://hgdownload.cse.ucsc.edu/goldenPath/dm6/bigZips/>

See `?BSgenomeForge` and the `BSgenomeForge` vignette (`vignette("BSgenomeForge")`) in the **BSgenome** software package for how to make a `BSgenome` data package.

## Author(s)

The Bioconductor Dev Team

## See Also

- `BSgenome` objects and the `available.genomes` function in the **BSgenome** software package.
- `DNAString` objects in the **Biostrings** package.
- The `BSgenomeForge` vignette (`vignette("BSgenomeForge")`) in the **BSgenome** software package for how to make a `BSgenome` data package.

**Examples**

```
BSgenome.DrosophilaMelanogaster.UCSC.dm6
genome <- BSgenome.DrosophilaMelanogaster.UCSC.dm6
seqlengths(genome)
genome$chr2L # same as genome[["chr2L"]]

## -----
## Extract the upstream sequences
## -----
## The upstream sequences can easily be extracted from the full genome
## sequences with something like:

library(GenomicFeatures)
txdb <- makeTxDbFromUCSC("dm6", tablename="refGene")
up1000seqs <- extractUpstreamSeqs(genome, txdb, width=1000)

## IMPORTANT: Make sure you use a TxDb package (or TxDb object) that
## contains a gene model based on dm6 or on a compatible genome (i.e.
## a genome with sequences identical to the sequences in dm6). Note
## that you can make a TxDb object from various annotation resources.
## See the makeTxDbFromUCSC(), makeTxDbFromBiomart(), and
## makeTxDbFromGFF() functions in the GenomicFeatures package for more
## information.

## -----
## Genome-wide motif searching
## -----
## See the GenomeSearching vignette in the BSgenome software
## package for some examples of genome-wide motif searching using
## Biostrings and the BSgenome data packages:
if (interactive())
  vignette("GenomeSearching", package="BSgenome")
```
