Package 'CoSIA'

October 15, 2023

Type Package

Title An Investigation Across Different Species and Tissues

Version 1.0.0

Description Cross-Species Investigation and Analysis (CoSIA) is a package that provides researchers with an alternative methodology for comparing across species and tissues using normal wild-type RNA-Seq Gene Expression data from Bgee. Using RNA-Seq Gene Expression data, CoSIA provides multiple visualization tools to explore the transcriptome diversity and variation across genes, tissues, and species. CoSIA uses the Coefficient of Variation and Shannon Entropy and Specificity to calculate transcriptome diversity and variation. CoSIA also provides additional conversion tools and utilities to provide a streamlined methodology for cross-species comparison.

R topics documented:

CoSIAn-class   *CoSIAn Class S4 Object*

Description

This Class is used to specify the information needed to conduct analysis using CoSIA's other meth-
ods. An object of this class will pass as an argument to other methods in CoSIA

Value

CoSIAn object

Slots

`gene_set` character. A singular gene or a list of genes.

`i_species` character. The species corresponding to gene_set.

`input_id` character. The type of id corresponding to gene_set.

`o_species` character. The singular or list of species that the gene set is being converted to.

`output_ids` character. The singular or list of id types that the gene set is being converted to.

`mapping_tool` character. The mapping tool, BiomaRt or annotationDBI, being used to map the conversion between IDs.

`ortholog_database` character. The ortholog database, HomoloGene or NCBIOrtho, being used to map the conversion between species.

`converted_id` data frame. Output of getConversion.

`map_tissues` character. A list of tissues being investigated.

`map_species` character. A list of species being investigated.

`gex` data frame. Output of gene expression data.

`metric_type` character. A list of possible metric the user wants to calculate.

`metric` data frame. Output of coefficient of variation of gene expression data.

CoSIAn-Constructor Constructor for the CoSIAn Class
Constructor for the CoSIAn Object

Description

The `CoSIAn` constructor creates a `CoSIAn` object from character vector(s).

Usage

```
CoSIAn(
  gene_set,
  i_species,
  input_id,
  o_species,
  output_ids,
  mapping_tool = "annotationDBI",
  ortholog_database = "HomoloGene",
  map_tissues,
  map_species,
  metric_type
)
```

Arguments

`gene_set`	A singular gene or a list of genes.
`i_species`	The species corresponding to gene_set.
`input_id`	The type of id corresponding to gene_set.
`o_species`	The singular or list of species that the gene set is being converted to.
`output_ids`	The singular or list of id types that the gene set is being converted to.
`mapping_tool`	The mapping tool, BiomaRt or annotationDBI, being used to map the conversion between IDs.
`ortholog_database`	
	The ortholog database, HomoloGene or NCBIOrtho, being used to map the conversion between species.
`map_tissues`	A list of tissues being investigated
`map_species`	A list of species being investigated
`metric_type`	A list of possible metric the user wants to calculate.

Value

An S4 `CoSIAn` object with character vector(s) as slots.

Examples

```
Kidney_Genes <- CoSIAn(
    gene_set = c(
        "ENSG00000008710", "ENSG00000118762",
        "ENSG00000152217"
    ), i_species = "h_sapiens", input_id = "Ensembl_id",
    o_species = c(
        "d_melanogaster", "m_musculus", "h_sapiens", "d_rerio",
        "c_elegans", "r_norvegicus"
    ), output_ids = c("Ensembl_id", "Symbol"),
    mapping_tool = "annotationDBI", ortholog_database = "HomoloGene",
    map_tissues = "heart", map_species = c("m_musculus"),
    metric_type = "DS_Gene"
)
```

---

getConversion	*getConversion Generic*

Description

getConversion Generic

Usage

```
getConversion(object)
```

Arguments

object   CoSIAn object with all user accessible slots filled

Value

initializes a generic function for getConversion as preparation for defining the getConversion Method

Examples

```
Kidney_Genes <- CoSIAn(
    gene_set = c("ENSG00000008710", "ENSG00000118762", "ENSG00000152217"),
    i_species = "h_sapiens", input_id = "Ensembl_id",
    o_species = c(
        "d_melanogaster", "m_musculus", "h_sapiens", "d_rerio",
        "c_elegans", "r_norvegicus"
    ),
    output_ids = c("Ensembl_id", "Symbol"), mapping_tool = "annotationDBI",
    ortholog_database = "HomoloGene", map_tissues = "heart",
    map_species = c("m_musculus"), metric_type = "DS_Gene"
)
Kidney_gene_conversion <- CoSIA::getConversion(Kidney_Genes)
```

```
getConversion,CoSIAn-method
```
getConversion Method

Description

getConversion Method

Usage

```
## S4 method for signature 'CoSIAn'
getConversion(object)
```

Arguments

object   CoSIAn object with all user accessible slots filled

Value

CoSIAn object with converted_id slot filled

Examples

```
Kidney_Genes <- CoSIAn(
    gene_set = c("ENSG00000008710", "ENSG00000118762", "ENSG00000152217"),
    i_species = "h_sapiens", input_id = "Ensembl_id",
    o_species = c(
        "d_melanogaster", "m_musculus", "h_sapiens", "d_rerio",
        "c_elegans", "r_norvegicus"
    ),
    output_ids = c("Ensembl_id", "Symbol"), mapping_tool = "annotationDBI",
    ortholog_database = "HomoloGene", map_tissues = "heart",
    map_species = c("m_musculus"), metric_type = "DS_Gene"
)
Kidney_gene_conversion <- CoSIA::getConversion(Kidney_Genes)
```

---

getGEx   *getGEx Generic*

Description

getGEx Generic

Usage

```
getGEx(object)
```

Arguments

object   CoSIAn object with all user accessible slots filled with converted_id slot filled

Value

initializes a generic function for getGEx as preparation for defining the getGEx Method

Examples

```
Kidney_Genes <- CoSIAn(
    gene_set = c("ENSG00000008710", "ENSG00000118762", "ENSG00000152217"),
    i_species = "h_sapiens", input_id = "Ensembl_id",
    o_species = c(
        "h_sapiens", "r_norvegicus"
    ), output_ids = c("Ensembl_id", "Symbol"),
    mapping_tool = "annotationDBI", ortholog_database = "HomoloGene",
    map_tissues = "heart", map_species = c("r_norvegicus"),
    metric_type = "DS_Gene"
)
Kidney_gene_conversion <- CoSIA::getConversion(Kidney_Genes)
Kidney_gene_gex <- getGEx(Kidney_gene_conversion)
```

---

getGEx,CoSIAn-method   *getGEx Method*

Description

getGEx Method

Usage

```
## S4 method for signature 'CoSIAn'
getGEx(object)
```

Arguments

object   CoSIAn object with all user accessible slots filled with converted_id slot filled

Value

CoSIAn Object with gex slot filled

Examples

```
Kidney_Genes <- CoSIAn(
    gene_set = c("ENSG00000008710", "ENSG00000118762", "ENSG00000152217"),
    i_species = "h_sapiens", input_id = "Ensembl_id",
    o_species = c(
        "h_sapiens", "r_norvegicus"
    ), output_ids = c("Ensembl_id", "Symbol"),
    mapping_tool = "annotationDBI", ortholog_database = "HomoloGene",
    map_tissues = "heart", map_species = c("r_norvegicus"),
    metric_type = "DS_Gene"
)
Kidney_gene_conversion <- CoSIA::getConversion(Kidney_Genes)
Kidney_gene_gex <- getGEx(Kidney_gene_conversion)
```

---

getGExMetrics   *getGExMetrics Generic*

Description

getGExMetrics Generic

Usage

```
getGExMetrics(object)
```

Arguments

object   CoSIAn object with all user accessible slots filled with converted_id slot filled

Value

initializes a generic function for getGExMetrics as preparation for defining the getGExMetrics
Method

Examples

```
Kidney_Genes <- CoSIAn(
    gene_set = c("ENSG00000008710", "ENSG00000118762", "ENSG00000152217"),
    i_species = "h_sapiens", input_id = "Ensembl_id", o_species = c(
        "h_sapiens", "r_norvegicus"
    ), output_ids = c("Ensembl_id", "Symbol"),
    mapping_tool = "annotationDBI", ortholog_database = "HomoloGene",
    map_tissues = "heart", map_species = c("r_norvegicus"),
    metric_type = "DS_Gene"
)
Kidney_gene_conversion <- CoSIA::getConversion(Kidney_Genes)
Kidney_gene_metric <- getGExMetrics(Kidney_gene_conversion)
```

---

getGExMetrics,CoSIAn-method
                                getGExMetrics Method

Description

getGExMetrics Method

Usage

```
## S4 method for signature 'CoSIAn'
getGExMetrics(object)
```

Arguments

object   CoSIAn object with all user accessible slots filled with converted_id slot filled

Value

CoSIAn Object with metric slot filled

---

getTissues	*getTissues*

Description

getTissues

Usage

```
getTissues(species)
```

Arguments

species   name of a species or multiple species that you want to get available tissue list
               for

Value

list of tissues that are common/available among the species or multiple species inputted

Examples

```
tissue <- getTissues(c("m_musculus"))
```

---

plotCVGEx   *plotCVGEx Generic*

Description

plotCVGEx Generic

Usage

```
plotCVGEx(object)
```

Arguments

object   CoSIAn object with all user accessible slots filled in as well as the converted_id
                  and metric slot filled

Value

initializes a generic function for plotCVGEx as preparation for defining the plotCVGEx Method

Examples

```
Kidney_Genes <- CoSIAn(
    gene_set = c("ENSG00000008710", "ENSG00000118762", "ENSG00000152217"),
    i_species = "h_sapiens", input_id = "Ensembl_id", o_species = c(
        "h_sapiens", "r_norvegicus"
    ), output_ids = c("Ensembl_id", "Symbol"),
    mapping_tool = "annotationDBI", ortholog_database = "HomoloGene",
    map_tissues = c("adult mammalian kidney","heart"),
    map_species = c("h_sapiens", "r_norvegicus"),
    metric_type = "CV_Tissue"
)

```

---

plotSpeciesGEx   *plotSpeciesGEx Generic*

Description

plotSpeciesGEx Generic

Usage

```
plotSpeciesGEx(object, single_tissue, single_gene)
```

Arguments

object	CoSIAn object with all user accessible slots filled in as well as the converted_id and gex slot filled
single_tissue	one tissue that the user wants to investigate across the mapped species
single_gene	one ensembl id that the user wants to investigate across the mapped species

Value

initializes a generic function for plotSpeciesGEx as preparation for defining the plotSpeciesGEx Method

Examples

```
Kidney_Genes <- CoSIAn(
    gene_set = c("ENSG00000008710", "ENSG00000118762", "ENSG00000152217"),
    i_species = "h_sapiens", input_id = "Ensembl_id", o_species = c(
        "d_melanogaster", "m_musculus",
        "h_sapiens", "d_rerio", "c_elegans", "r_norvegicus"
    ), output_ids = c("Ensembl_id", "Symbol"),
    mapping_tool = "annotationDBI", ortholog_database = "HomoloGene",
    map_tissues = "heart", map_species = c("m_musculus"),
    metric_type = "DS_Gene"
)
Kidney_gene_conversion <- CoSIA::getConversion(Kidney_Genes)
Kidney_gene_gex <- getGEx(Kidney_gene_conversion)
plotSpeciesGEx(Kidney_gene_gex, "liver", "ENSG00000008710")
```

plotSpeciesGEx,CoSIAn-method

plotSpeciesGEx Method

Description

plotSpeciesGEx Method

Usage

```
## S4 method for signature 'CoSIAn'
plotSpeciesGEx(object, single_tissue, single_gene)
```

Arguments

object	CoSIAn object with all user accessible slots filled in as well as the converted_id and gex slot filled
single_tissue	one tissue that the user wants to investigate across the mapped species
single_gene	one ensembl id that the user wants to investigate across the mapped species

Value

plot object

Examples

```
Kidney_Genes <- CoSIAn(
    gene_set = c("ENSG00000008710", "ENSG00000118762", "ENSG00000152217"),

```

---

viewCoSIAn   *viewCoSIAn Generics*

Description

viewCoSIAn Generics

Usage

```
viewCoSIAn(object, slot_name)
```

Arguments

object   CoSIAn object with all user accessible slots filled

slot_name   name of output slots

Value

initializes a generic function for viewCoSIAn as preparation for defining the viewCoSIAn Method

Examples

```
Kidney_Genes <- CoSIAn(
    gene_set = c("ENSG00000008710", "ENSG00000152217"),
    i_species = "h_sapiens", input_id = "Ensembl_id",

    map_species = c("d_melanogaster"), metric_type = "DS_Gene"
)
viewCoSIAn(Kidney_Genes, "converted_id")
```

---

viewCoSIAn,CoSIAn-method
                        viewCoSIAn

Description

viewCoSIAn

Usage

```
## S4 method for signature 'CoSIAn'
viewCoSIAn(object, slot_name)
```

Arguments

`object`	CoSIAn object with all user accessible slots filled
`slot_name`	name of output slots

Value

slots in CoSIAn object

Examples

```
Kidney_Genes <- CoSIAn(
    gene_set = c("ENSG00000008710", "ENSG00000152217"),
    i_species = "h_sapiens", input_id = "Ensembl_id",
    o_species = c(
        "d_melanogaster"
    ),
    output_ids = c("Ensembl_id", "Symbol"), mapping_tool = "annotationDBI",
    ortholog_database = "HomoloGene", map_tissues = "heart",
    map_species = c("d_melanogaster"), metric_type = "DS_Gene"
)
viewCoSIAn(Kidney_Genes, "converted_id")
```
