MafDb.TOPMed.freeze5.hg19-package

Annotation package for minor allele frequency data from NHLBI TOPMed freeze5

Description

This annotation package stores minor allele frequency (MAF) data from the NHLBI TOPMed consortium, freeze5 version. The data are exposed to the user in the form of a GScores object, named after the package and loaded into memory only as different chromosomes and populations are being queried. The class definition and methods to access GScores objects are found in the GenomicScores software package. To minimize disk space and memory requirements, MAF values larger or equal than 0.1 are stored using two significant digits, while MAF values smaller than 0.1 are stored using one significant digit.

Please consult the TOPMed page at https://bravo.sph.umich.edu before you use these data for your own research.

Format

MafDb.TOPMed.freeze5.hg19 GScores object containing MAF values from the NHLBI TOPMed Consortium downloaded

Author(s)

R. Castelo
